Where can I find Toolkit SID file ?

Justin Schneider - 2026-07-27 - Toolkit

ToolKit may ask for a ***.SID** file during the first connection to that device. Once the directory of the file got defined, ToolKit will not ask again.

The *.SID file gets copied and is located in the same directory as the ***.WTOOL** file.

If you don’t have the *.SID file yet, many controls configuration files can get downloaded here:

https://www.woodward.com/support/industrial-service-and-support/find-control-configuration-files/

- download the ***.MSI** file (Microsoft Installer Package), which contains the *.WTOOL and *.SID file

File types for your reference:

*.WTOOL File = contains all display screens and pages for online configuration, which are associated with the respective *.SID file.

*.SID File = contain all display and configuration parameters available in ToolKit

*.WSET File = contain all settings of the ToolKit configuration parameters provided by the SID file or user-defined settings read from the unit.

Please add or modify the file location directory:

Woodward Windows based installers, got changed over time, which results in different possible SID file directories:

- C:\ProgramData\Woodward\ToolKit\Applications (ProgramData is a hidden folder in default settings of Microsoft)
- C:\Program Files (x86)\Woodward\ToolKit\Applications
- C:\Users\username\Documents\Woodward\Toolkit\Applications
- user-defined locations
