LMS100 wset files

Nicole Chittum (Turbine) - 2018-05-11 - Comments (0) - Turbine Articles

I had a GE customer asking for a wset file for a EGMV. We usually send one to them if the valve doesn't have an ID module. James Wareing has made wset files for all the LMS100 valves without an ID module and they can be found here -

G:\turbines\Special_Projects\102456 Turbine Application Engineering

Support_General\LMS100 Support\LMS100 SAC Valve Files\Customer Settings Files. There is also a link to that folder on this site - http://activenet/aN/?page_id=12181. You need to know the revision of DVP they are using and the PN and SN of the valve.
