## **Voltage Asymmetry calculation - MFR300 - MFR13**

Simon - 2021-12-15 - MFR300

## • MFR13

- $\circ\;$  The MFR13 calculates the asymmetry as the maximum deviation of each delta voltage from the average.
- $\circ~$  In Principle it is the ANSI standard, but
  - ANSI: monitor MAX / Average in [%]
  - MFR13: monitor MAX-Average in [V]

## MFR300

The MFR300 calculates the asymmetry from the negative sequence in relation to the nominal voltage

The formula of the negative sequence is:

## ×

The monitoring would be for  $\left|G\right|$  / nominal voltage
