easYgen-800/-1800 Event History - possible number of entries on 8 GB SD Card

Justin Schneider - 2026-07-27 - [easYgen-1800](#)

Theoretically one entry of the event history does need a storage of **60 Bytes**.

i.e. :

a 8GB Micro SD Card can store approx. 133.3 Million event history entries!

In total then:

there is the internal 99 entries + the number of entries on the SD Card.
