How to Upgrade Ethernet Capability: DTSC-200A -P1 to -P2?

Justin Schneider - 2026-11-16 - DTSC-200

Order Part Number: 10-068-303

While it is possible to field upgrade the DTSC-200A, please note that this is not the preferred solution due to the additional effort and processing required by Woodward. For greater efficiency and cost-effectiveness, we recommend ordering the P2 package directly.
(minimum order quantity: 10 licenses)

Important Note: To acquire an upgrade key, customers must provide Woodward with the serial number of the device they wish to upgrade. The serial number can be found in the Toolkit software on the version screen or printed on the sticker located on the back of the controller.

For detailed instructions and requirements for this upgrade, please refer to the attached **Application Note 45030**.
