When attempting an application load, Toolkit responds with "seed key" challenge

John Felts - 2024-09-27 - [Engine Articles](#)

Affected units: 2301E, ECM3, and 733/Impulse II using ServLink

Issue: If the control is connected to SOS and an application load is attempted through Toolkit, a prompt for seed-key authorization is demanded and will not allow app load.

Solution: Select cancel, disconnect from SOS session and attempt Load Application again. If control is unresponsive, reboot (cycle power) may be required.
